**Subject:** Standard "M" Series Summary - Question

Bob & Ted,  
We are in the process of setting up standard design files for all of the Standard "M" series boilers. While entering the data, I noticed that the face area for the 20M & 21M is different from that of the 16M through 19M. This confused me as these units have the same overall height and width dimensions (14'-5 1/4" H x 12'-0" W). Please provide an explanation as I believe the values may be in error.  
Thanks,  
Mark White
